DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,733,287 in view of Russ (3597845). The claims of the '287 patent claim show all of the present claim limitation except for the range of angle of the threaded bore axis with the vertical dimension of the base portion. Russ shows an axis of a threaded bore that is at an angle of 90 degrees. It would be obvious to one of ordinary skill in the art to modify the claims of the '287 patent to include an angle of the threaded bore with respect to the vertical dimension of the base portion of 90 degrees as shown by Russ in order to make use of known positioning of known elements in the art. The specific range of possible angles is an obvious matter of choice in degree to one of ordinary skill in the art.

Drawings

The drawings filed April 16, 2004 have been found to be acceptable by the examiner.

Specification

The specification is objected to because the range in the claims of 15 to 55 degrees is only described in the Abstract and the claims and is not described in the specification.

Allowable Subject Matter

Claims 1-20 stand rejected under double patenting only.
